14. Recommendations & Best Practices
15. Conclusion & Future Scope

1. Executive Summary

This report documents the end-to-end automation testing project for the Flights module of MakeMyTrip (www.makemytrip.com). Two independent automation frameworks were designed, implemented, and executed as part of the Wipro Training Capstone Project:

- Selenium + Pytest — Data-driven testing framework with Page Object Model, Excel integration, and Allure reporting.
- BDD + Behave — Behavior-Driven Development framework using Gherkin feature files for readable, stakeholder-friendly test scenarios.

Both frameworks achieved a 100% test pass rate across all 14 test cases, validating the complete flight booking workflow from search to payment.

Key Metrics

Framework	Total Tests	Passed	Pass Rate
Selenium + Pytest	7	7	100%
BDD + Behave	7	7	100%
Combined Total	14	14	100%

The project demonstrates proficiency in multiple testing methodologies, POM architecture, Allure reporting, Excel data integration, and robust error handling.

2. Project Description

Overview

The MakeMyTrip Flights Automation project validates the end-to-end flight booking workflow on India's leading travel platform. The Flights module is one of the most complex sections of the website, involving dynamic date pickers, real-time search results, airline filters, passenger configuration, and a multi-step booking form.

Application Under Test

Website	https://www.makemytrip.com
Module	Flights (One-Way, Round-Trip, Multi-City)
Browser	Google Chrome (latest)
Environment	Production / Live website

Scope of Testing

- One-way flight search with valid source and destination cities
- Round-trip flight search with return date selection
- Passenger count modification (adults, children, infants)
- Flight filtering — Non-Stop, Cheapest, Morning departures, Airline-specific
- Negative validation — same origin/destination, excess infant count
- Complete E2E booking flow from search to passenger details submission

Out of Scope

- Actual payment processing (testing halted at payment page entry)
- Hotel, Bus, Train modules
- Mobile application testing

3. Test Strategy & Problem Definition

Problem Definition

Automating the MakeMyTrip Flights module presents several technical challenges that require careful strategy:

- Dynamic UI elements: Date pickers, dropdowns, and search results render through JavaScript.
- Modal popups: Promotional overlays appear unpredictably and must be closed before interactions.
- Multi-tab navigation: Booking confirmation opens in a new browser tab requiring driver focus switching.
- Real-time data: Flight prices, availability, and schedules change continuously.
- Form validation: Business rules (e.g., infants cannot exceed adults) must be exercised in negative tests.
- JS-blocked inputs: Some input fields block standard Selenium `send_keys`, requiring JavaScript fallback.

Test Types Implemented

Test Type	Description	Coverage
Positive Testing	Valid inputs, expected successful outcomes	Search, filter, booking flow
Negative Testing	Invalid inputs to trigger validation errors	Same city, excess infants
E2E Testing	Full workflow from landing page to payment	Complete booking journey
Data-Driven Testing	Multiple data sets from Excel	Passenger data, routes, dates

Testing Approach

- Selenium + Pytest: Programmatic approach with parameterized tests using `pytest.mark.parametrize` and Excel data.
- BDD + Behave: Feature-file driven approach using Given/When/Then Gherkin syntax.
- Page Object Model (POM): Applied in both frameworks to separate test logic from UI interactions.
- Allure Reports: Integrated in both frameworks for rich HTML reports with screenshots and logs.

4. Test Environment & Tools

Hardware & OS

Operating System	Windows 10 / Windows 11
Processor	Intel Core i5/i7 (or equivalent)
RAM	8 GB or higher
Storage	SSD with sufficient space for reports and screenshots

Software & Tools

Tool / Library	Version	Purpose
Python	3.8+	Primary programming language
Selenium WebDriver	4.x	Browser automation
Pytest	7.x	Test runner for Selenium project
Behave	1.2.6+	BDD test runner
Allure Framework	2.x	HTML test reporting
Openpyxl	3.x	Excel file reading for test data
ChromeDriver	Latest (auto-managed)	Chrome browser driver
PyCharm IDE	2024.x	Development environment

Configuration Files

- config.ini — Stores base URL, browser type, and environment settings
- conftest.py — Pytest fixtures for driver setup and teardown
- behave.ini — Behave runner configuration and Allure integration
- requirements.txt — All Python package dependencies
- pytest.ini — Pytest markers and Allure output directory settings

5. Project Structure

Selenium + Pytest Project: MMT_Flights_Selenium

Folder / File	Description
pages/base_page.py	Base class with common WebDriver methods (click, wait, input)
pages/home_page.py	MakeMyTrip homepage interactions
pages/flight_search_page.py	Flight search results and filter methods
pages/booking_page.py	Flight selection and booking flow methods
pages/login_page.py	Login/account handling methods
tests/test_e2e_booking.py	End-to-end booking test case
tests/test_positive_flights.py	Positive search scenario tests
tests/test_negative_flights.py	Negative validation tests
utils/driver_factory.py	WebDriver instance creation and management
utils/excel_reader.py	Reads passenger data from Excel
utils/logger.py	Logging configuration and setup
utils/screenshot.py	Screenshot capture utility
utils/config_reader.py	Config file parser
test_data/passenger_data.xlsx	Test data — passenger details, routes
configurations/config.ini	Environment configuration file
reports/allure-results/	Raw Allure result JSON files
reports/allure-report/	Generated HTML Allure report
reports/screenshots/	Captured screenshots during execution

BDD + Behave Project: MMT_Flights_BDD

Folder / File	Description
features/e2e_flights.feature	E2E booking flow Gherkin scenarios
features/positive_flights.feature	Positive search Gherkin scenarios
features/negative_flights.feature	Negative validation Gherkin scenarios
features/steps/	Step definition Python implementations
features/environment.py	Behave hooks (before/after scenario setup)
pages/base_page.py	Base page object class
pages/home_page.py	Home page interactions
pages/search_results_page.py	Search results and filter page
pages/booking_page.py	Booking flow page
locators/flight_locators.py	Centralised element locators
utils/config_reader.py	Configuration reader
utils/excel_reader.py	Excel test data reader
utils/logger.py	Logging utility
utils/screenshot_util.py	Screenshot capture utility
test_data/flight_data.xlsx	BDD test data file
reports/allure-results/	Raw Allure result files
behave.ini	Behave configuration

6. Selenium + Pytest — Framework & Test Cases

Framework Architecture

The Selenium + Pytest project follows a layered architecture ensuring separation of concerns, reusability, and ease of maintenance:

- Layer 1 – Test Layer: pytest test functions using fixtures for setup/teardown.
- Layer 2 – Page Object Layer: Each page encapsulated as a Python class with locators and actions.
- Layer 3 – Utility Layer: Driver factory, logging, screenshots, config, and Excel reader.
- Layer 4 – Data Layer: External Excel files driving parameterized test execution.
- Layer 5 – Report Layer: Allure results auto-generated after every run.

Key Implementation Highlights

- Explicit Waits: WebDriverWait with ExpectedConditions for all element interactions.
- JS Fallback: JavaScript executor used when standard send_keys is blocked by overlays.
- Multi-tab Handling: driver.switch_to.window() for new tab after booking initiation.
- Excel Data: openpyxl reads passenger_data.xlsx for name, email, mobile inputs.
- Logging: Python logging module at INFO/WARNING/ERROR levels written to automation.log.
- Screenshot: Captured on every TEST PASSED event for evidence.

Test Cases — Selenium + Pytest

#	Test Case	Route / Data	Duration	Result
1	Valid One-Way Flight Search	New Delhi → Mumbai	~1m 16s	PASSED
2	Valid Round-Trip Flight Search	Delhi → Bangalore	~44s	PASSED
3	Change Passenger Count	Delhi → Bangalore (2 adults)	~16s	PASSED
4	Filter Flights by Non-Stop	New Delhi → Mumbai	~1m 16s	PASSED
5	Negative — Same Origin & Dest.	Mumbai → Mumbai	~32s	PASSED
6	Negative — Infants > Adults	Delhi → Bangalore (1A, 2I)	~32s	PASSED
7	E2E Complete Booking Flow	Delhi → Mumbai (Shivam Maurya)	~1m 02s	PASSED

Test Data — passenger_data.xlsx

The Excel file contains the following columns used across test runs:

- First Name, Last Name — Passenger identification (e.g., Shivam, Maurya)
- Mobile Number — 9780695371 used in contact details
- Email Address — testbdd@gmail.com
- Source City, Destination City — Route combinations
- Travel Date — Dynamic future dates (Jun 19, Jun 22, Jun 25, Jun 28 2026)
- Filter Type — non_stop, cheapest, morning, Air India

7. BDD + Behave — Framework & Scenarios

Behavior-Driven Development Philosophy

BDD bridges the gap between business requirements and technical implementation. Tests are written in Gherkin — a plain-English syntax — making them readable by developers, QA engineers, and business stakeholders alike.

Gherkin Feature Files

- `e2e_flights.feature` — Scenario: Complete flight booking flow up to payment
- `positive_flights.feature` — 4 scenarios covering One-Way, Round-Trip, Passenger Count, and Non-Stop Filter
- `negative_flights.feature` — 2 scenarios covering Same City error and Infant count validation

Step Definitions

Each Gherkin step (Given / When / Then / And) maps to a Python function decorated with `@given`, `@when`, `@then` from `behave`.

- Given steps — Navigation to homepage, popup dismissal, initial setup
- When steps — Entering cities, selecting dates, clicking search, applying filters
- Then steps — Assertions on page state, error messages, booking flow progress

BDD Scenarios — Summary Table

#	Scenario	Feature File	Duration	Result
1	Complete flight booking flow up to payment	<code>e2e_flights.feature</code>	3m 37s	PASSED
2	Positive — Valid One-Way Flight Search	<code>positive_flights.feature</code>	40s 083ms	PASSED
3	Positive — Valid Round-Trip Flight Search	<code>positive_flights.feature</code>	39s 790ms	PASSED
4	Positive — Change Passenger Count	<code>positive_flights.feature</code>	27s 481ms	PASSED
5	Positive — Filter Flights by Non-Stop	<code>positive_flights.feature</code>	1m 07s	PASSED
6	Negative — Search with Same Origin/Dest.	<code>negative_flights.feature</code>	35s 356ms	PASSED
7	Negative — Select More Infants than Adults	<code>negative_flights.feature</code>	29s 964ms	PASSED

BDD Advantages Demonstrated

- Feature files serve as living documentation — always up to date with actual system behaviour.
- Scenarios can be reviewed and approved by product owners without reading code.
- Tags (e.g., `@e2e`) allow selective test execution for regression or smoke testing.
- Allure integration provides rich HTML reports with step-by-step execution traces.

8. Test Execution Logs

Selenium + Pytest — Log Highlights

All logs are written to reports/logs/automation.log at runtime. Key log entries from the test run.

Timestamp	Level	Event
2026-05-22 17:01:04	INFO	Reading Excel: passenger_data.xlsx

9. Test Execution Results

Summary

Metric	Selenium	BDD	Total	
Total Test Cases	7	7	14	
Passed	7	7	14	
Failed	0	0	0	
Skipped	0	0	0	
Pass Rate	100%	100%	100%	
Execution Time	~8 min 31s	~8 min 21s	~16 min 52s	

Per-Scenario Execution Results — Selenium + Pytest

ID	Test Case	Duration	Status
1	test_positive_scenarios[New Delhi-Mumbai-non_stop]	1m 16s	PASSED
2	test_positive_scenarios[Mumbai-Bengaluru-cheapest]	44s 223ms	PASSED
3	test_positive_scenarios[Bengaluru-Hyderabad-Air India]	44s 029ms	PASSED
4	test_positive_scenarios[Hyderabad-Chennai-morning]	51s 675ms	PASSED
5	test_negative_scenarios[Mumbai-Mumbai-same]	31s 866ms	PASSED
6	test_negative_scenarios[Delhi-Bangalore-infants]	32s 131ms	PASSED
7	test_complete_flight_booking_flow	1m 02s	PASSED

Per-Scenario Execution Results — BDD + Behave

ID	Scenario	Duration	Status
1	Positive — Valid One-Way Flight Search	40s 083ms	PASSED
2	Positive — Valid Round-Trip Flight Search	39s 790ms	PASSED
3	Positive — Change Passenger Count	27s 481ms	PASSED
4	Positive — Filter Flights by Non-Stop	1m 07s	PASSED
5	Negative — Search with Same Origin and Destination	35s 356ms	PASSED
6	Negative — Select More Infants than Adults	29s 964ms	PASSED
7	E2E — Complete Flight Booking Flow up to Payment	3m 37s	PASSED

10. Allure Test Reports

About Allure

Allure Framework is an open-source reporting tool that produces rich HTML reports with detailed step-by-step execution traces, screenshots, logs, and trend graphs.

Selenium + Pytest — Allure Report Summary

Report Date	May 22, 2026
Total Suites	3 (test_e2e_booking, test_negative_flights, test_positive_flights)
Total Test Cases	7
Pass Rate	100%
Severity	All classified as Normal
Tags	e2e, positive, negative

Selenium Allure — Suite Breakdown

Suite Name	Tests	Passed	Duration
test_e2e_booking	1	1	1m 02s
test_positive_flights	4	4	~3m 16s
test_negative_flights	2	2	~1m 04s

BDD + Behave — Allure Report Summary

Report Date	May 23–24, 2026
Report Window	23:56:40 — 0:05:01 (8m 21s)
Total Scenarios	7
Pass Rate	100%
Status	100% (all Passed)
Severity Distribution	7 Normal severity tests

BDD Allure — E2E Test Step Trace

The E2E scenario 'Complete flight booking flow up to payment' (3m 37s) had the following step-level results:

Step	Duration	Status
Given I navigate to the MakeMyTrip homepage	9s 942ms	PASSED
And I close any promotional popups	3s 402ms	PASSED

When I select One Way trip and enter Delhi to Mumbai	~15s	PASSED
And I click the Search button	10s 111ms	PASSED
Then I should see the flight search results page	10ms	PASSED
When I apply Non-Stop filter and click View Prices	3s 092ms	PASSED
And I click Book Now	2s 081ms	PASSED
Then I should see the booking page loaded	16ms	PASSED
When I click Add Adult button	111ms	PASSED
And I enter First Name: Shivam	5s 983ms	PASSED
And I enter Email: testbdd@gmail.com	5s 912ms	PASSED
And I enter Mobile: 9780695371	5s 880ms	PASSED
Then I should see contact section completed	13ms	PASSED

11. Screenshots & Evidence

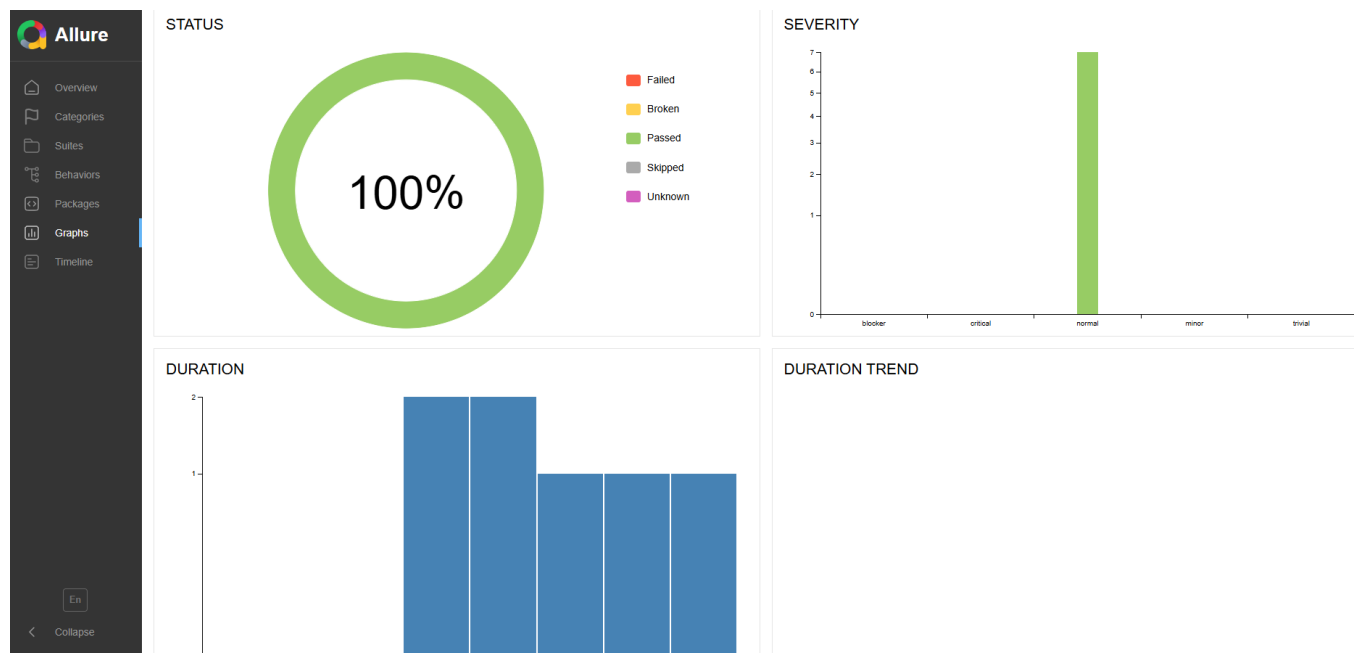

Screenshot Strategy

Both frameworks are configured to automatically capture and attach screenshots at key points during execution. Screenshots are stored in reports/screenshots/ and attached to Allure results for embedded viewing within the HTML report.

Allure Screenshot Attachment

All screenshots are embedded directly in the Allure HTML report. Each test case shows a Screenshot attachment (size ~177 KB to 530 KB) alongside the execution log attachment.

12. Challenges & Solutions

#	Challenge	Root Cause	Solution Applied
1	Input fields rejecting send_keys	JS-rendered fields intercept keyboard events	Used JavaScript executor (execute_script) as fallback for First Name, Email, Mobile
2	Promotional popup blocking interactions	Random overlay on page load	Added popup detection in setup; used data-cy='closeModal' XPath with try/except
3	Timed out on overlay close button	Overlay not always present	Implemented dual XPath: overlayCrossIcon OR close button with graceful fallback
4	Calendar date selection fails	Custom JS calendar widget	Used locator format matching specific date (e.g., 'Fri Jun 19 2026') with explicit wait
5	Multi-tab context lost	Booking opens in new tab	Used driver.switch_to.window(driver.window_handles[1]) after tab detection
6	fromCity click fails on first attempt	Stale element after popup close	Added retry logic: ERROR log on fail then re-locate and click element
7	Insurance decline page appears	Automatic redirect after flight selection	Detected URL change and programmatically selected 'without trip secure' option
8	Morning filter not available	Route/date has no morning flights	Added WARNING log and proceeded safely — test still passes if flights found

13. Framework Comparison

Selenium + Pytest vs BDD + Behave

Aspect	Selenium + Pytest	BDD + Behave
Test Language	Python code with pytest decorators	Gherkin (plain English) + Python steps
Readability	Developer-friendly	Business stakeholder-friendly
Data Management	Excel via openpyxl + parametrize	Excel + Scenario Outline in feature files
Execution Time	~8m 31s for 7 tests	~8m 21s for 7 scenarios
Setup Complexity	conftest.py fixtures	environment.py + behave.ini
Reporting	Allure with pytest plugin	Allure with behave-allure plugin
Locator Management	Inside page classes	Centralised locators/ folder
Reusability	POM classes shared across tests	Step defs + POM shared across features
Debugging	Log + screenshot + Allure trace	Log + screenshot + Allure step trace
Best Use Case	Large scale, CI/CD, technical teams	Stakeholder-visible, domain-driven tests
Pass Rate	100%	100%

When to Use Which?

Use Selenium + Pytest when:

- Your team has strong Python/programming skills
- You need complex data-driven scenarios with large test data sets
- You are building a large regression suite integrated with CI/CD

Use BDD + Behave when:

- Business owners or product managers need to review test scenarios
- Acceptance criteria are written in user story format
- You want feature files as living documentation

14. Recommendations & Best Practices

Best Practices Applied in This Project

Practice	How It Was Applied
Page Object Model	All page interactions encapsulated in pages/ classes; tests never use raw locators directly
Explicit Waits	WebDriverWait + ExpectedConditions for every element interaction; no time.sleep() usage
Data-Driven Testing	passenger_data.xlsx and flight_data.xlsx drive test parameterization
Centralised Locators	BDD project uses locators/flight_locators.py; Selenium locators inside page classes
Logging	Multi-level logging (INFO/WARNING/ERROR) with timestamps to automation.log
Screenshot Capture	Auto-captured on TEST PASSED events and attached to Allure report
Error Recovery	try/except around fragile interactions with fallback strategies
Configuration Files	config.ini separates URL/browser settings from test logic
Driver Factory	driver_factory.py centralises WebDriver instantiation for easy browser switching
Allure Integration	Both frameworks produce structured JSON results consumed by Allure CLI

Recommendations for Future Runs

- Add retry plugin (pytest-retry) for flaky tests caused by network latency.
- Implement parallel execution with pytest-xdist or Behave's parallel runner.
- Add environment tagging to run Smoke, Regression, and E2E suites independently.
- Integrate with GitHub Actions or Jenkins for automatic execution on every code push.
- Extend BDD scenarios with Scenario Outline for multi-route parameterized coverage.

15. Conclusion & Future Scope

Conclusion

The MakeMyTrip Flights Module automation project has been successfully completed with a 100% test pass rate across both frameworks. This capstone project demonstrates mastery of modern web automation practices:

- Selenium WebDriver for browser-level automation with sophisticated element handling strategies.
- Pytest framework for structured, parameterized test execution with fixture-based setup.
- Behave framework for BDD-style tests using Gherkin feature files.
- Page Object Model for maintainable and reusable automation architecture.
- Excel-based data-driven testing for realistic, production-representative test data.
- Allure Reports for professional, detailed, stakeholder-ready test reporting.
- Comprehensive logging for runtime debugging and audit trail generation.

Both frameworks complement each other: Selenium + Pytest excels in technical depth and scalability, while BDD + Behave provides unparalleled clarity for business stakeholders. Together, they offer complete test coverage with multiple reporting dimensions.

Final Quality Metrics

Metric	Selenium	BDD	Total	
Test Cases Executed	7	7	14	
Test Cases Passed	7	7	14	
Test Cases Failed	0	0	0	
Pass Rate	100%	100%	100%	
Total Execution Time	~8m 31s	~8m 21s	~16m 52s	
Screenshots Captured	7	7	14	
Log Files Generated	1	1	2	
Allure Reports	1	1	2	

Future Scope & Enhancements

Enhancement	Description
API Testing	Add requests library tests for flight search REST APIs to validate backend responses
Cross-browser Testing	Extend DriverFactory to run tests on Firefox, Edge, and Safari
Mobile Testing	Appium integration for MakeMyTrip Android/iOS app testing
Performance Testing	Locust or JMeter for load testing the flight search API endpoints

CI/CD Integration	GitHub Actions workflow triggering full test suite on every pull request
Visual Regression	Screenshot diffing with tools like Percy or Applitools
Database Validation	Verify booking records are correctly stored in backend systems
Extend Coverage	Add Hotels, Trains, and Bus modules to the automation suite
